

ELIMAWEED™

NEW CHEMICAL-FREE CHOICE!

Pesticides and herbicides can have a negative effect on human, pet and ecological health through the contamination of air, water, soil and food sources. More than 350 communities in Canada have responded to this threat by banning their use.

Elimaweed™ is a non-selective alternative herbicide that is tough on weeds but leaves no harmful residue in the soil. Using acetic acid, an active ingredient on the City of Toronto's approved list, Elimaweed kills both annual and perennial weeds within hours.

- Ready-to-use quick-acting contact herbicide.
- Alternative to traditional chemical weed killers.
- Kills both annual and perennial weeds within hours*
- Can replant or reseed as soon as weeds are completely dead.
- No residue - quickly breaks down in soil.
- Does not change soil pH or pollute groundwater.

* Mature perennial weeds may need a second application

SEE AMAZING RESULTS

- Simply point spray nozzle at the centre of the weed.
- Press trigger two to three times; try to get as much of the spray on the weed as possible.
- Remember Elimaweed is non-selective and will affect all plants it comes in contact with.
- Dramatic results in sunny location; will be a longer process in the shade.
